

FOR IMMEDIATE RELEASE

20-20 TECHNOLOGIES AND CADSOFT ANNOUNCE AVAILABILITY OF AN INTEGRATED DESIGN AND BIM SOLUTION FOR CONSTRUCTION INDUSTRY

Leading software companies partner to connect design and construction professionals

GUELPH, Ontario, Canada, April 22 2010 – Cadsoft Corporation, the leading developer of Building Information Modeling (BIM) design software for the professional residential design market, recently announced that the industry's leading interior design software is now integrated with Cadsoft's home design BIM solution. The integration between these technologies will allow for designers, remodelers, and builders to communicate with the kitchen and bath design industry.

Cadsoft's Envisioneer customers now have the ability to receive intelligent information from the 20-20 Design system, therefore completing a bi-directional communication process. The information from 20-20 Design includes cabinets, appliances, fixtures, countertops, moulding, and manufacturer data and is retained as intelligent information within the Envisioneer BIM model.

This important step further connects the construction industry by bringing together designers, builders, remodelers, and kitchen and bath specialists. It is also essential for the lumber, building and material (LBM) dealer network for transferring data within the various facets of the supply chain.

"Our announcement of the integration process is one of the most significant collaborative efforts made between BIM technologies in the residential industry" states Brad Finck, Vice President of Cadsoft Corporation. "By reaching this technological breakthrough, clients using Envisioneer and 20-20 Design can now pass important information bi-directionally, which not only saves valuable redraw time but also drastically reduces potential errors caused by duplication and recreation of data between platforms."

Craig Yamauchi, Executive Vice President of North American Sales for 20-20 Technologies adds "Our strategic partnership with Cadsoft is the beginning of a new era for 20-20 in serving the needs of the construction industry. The progress we have made in cooperation with Cadsoft illustrates our commitment to improving the collaboration of 3D data assets throughout the supply chain of the construction industry."

The two organizations have previewed their integration efforts at the KBIS show April 17-19, 2010. Shipping will commence shortly after with the release of Envisioneer version 6.1 and 2020 Design version 9.0.

More information regarding the partnership can be obtained at www.cadsoft.com/2020/index.php.
